## Project Profile

Design Architect: HKS

Architect of Record: SmithGroupJJR

## The Project

Prominently situated on a historic hillside overlooking the Potomac River, MGM National Harbor is a premier entertainment destination and the first luxury gaming resort in the Capital Region. The \$1.4 billion, 1.7 million sq. ft. entertainment complex includes a casino, restaurants, shopping, theater, spa, hotel, parking garage and meeting & convention center.

## Inpro® Products Used

A variety of floor, wall and ceiling expansion joint cover systems, Fireline 520® fire barrier systems and fire-rated foam:

Expansion Joint Cover Systems: 3,220 LF

Fireline 520 Fire Blanket: 2,330 LF

Fire Rated Foam: 400 LF

Special project considerations: The Inpro scope was for interior joints only. Fireline 520 Water Guard® fire blankets with optional drain and end dam accessories were selected as a forward thinking measure to prevent damage to the extensive quantities of fire barrier on the job and to also route any water away as to not trap the water, as many joint locations went through work rooms, kitchens, and other spaces that potentially could be wet.

The types of cover systems needed for the job varied greatly, and JointMaster had solutions for each unique space requirement. Hidden covers with limited sightline, no-bump floor covers, and low visual impact covers were utilized in high profile areas of the project along with added stainless steel finishes.
